PROFESSIONAL SUMMARY

Software Engineer with proven experience driving 0→1 product development, backend architecture, and production-grade full-stack systems. Hands-on expertise in **TypeScript, Node.js, Express.js, Next.js, React.js, PostgreSQL, and MongoDB**, with deep focus on async workflows, RESTful microservices, and high-reliability data models. Proven track record of owning end-to-end production lifecycles, configuring **GitLab CI/CD pipelines**, and orchestrating zero-downtime **Vercel deployments**. Highly execution-focused builder who thinks like an owner, writes clean, maintainable code, and builds scalable SaaS backends with robust observability, automated delivery, and strict production discipline.

EXPERIENCE

Software Developer Intern *ReadNRevise*
Sep 2025 – Aug 2026

- Led end-to-end backend and full-stack feature delivery for production SaaS services using **TypeScript, Node.js, Next.js, PostgreSQL, and MongoDB**.
- Architected high-throughput, fault-tolerant **RESTful APIs** and asynchronous processing workflows, reducing latency by **35%** across core endpoints.
- Built robust JWT-based authentication mechanisms and multi-tenant Role-Based Access Control (RBAC) across administrative platforms.
- Automated continuous delivery using **GitLab CI/CD pipelines** and managed high-availability production rollouts via **Vercel**.
- Owned system monitoring and production stability, proactively tracking error logs and debugging edge-case failures to ensure **99.9% uptime**.
- Collaborated directly with cross-functional leads in technical design reviews, enforcing strict code review criteria, modular schema design, and clean code hygiene.

TECHNICAL SKILLS

Programming Languages:

- TypeScript, JavaScript (ES6+), SQL, Go (Familiar)

Backend & Systems:

- Node.js, Express.js, REST APIs, Microservices, Async Pipelines, Message Queuing (Redis/BullMQ patterns), JWT Auth

Databases & Storage:

- PostgreSQL, MongoDB, Supabase, Strapi CMS, Schema Design, Data Modeling, Query Optimization

Frontend & UI Engineering:

- React.js, Next.js, Tailwind CSS, Redux Toolkit, Full-Stack Architecture, Real-Time Interactive Dashboards

DevOps, Cloud & Tooling:

- GitLab, GitLab CI/CD Pipelines, Vercel Deployments, Docker, Linux, Git, Postman, System Monitoring

PROJECTS

ReadNRevise LMS (LIVE) *TypeScript, Node.js, Next.js, React.js, PostgreSQL, MongoDB, REST APIs, Vercel*
Live: `http://readnrevise.in/`

- Architected an end-to-end, multi-tenant SaaS learning platform featuring modular administrative portals and decoupled backend microservices.
- Designed robust, low-latency **RESTful APIs** and database query models supporting real-time user progress and content aggregation.
- Deployed and maintained production workloads on **Vercel**, establishing automated preview cycles and maintaining continuous **99.9% uptime**.
- Implemented system-wide observability, error logging, and schema validations to ensure peak availability under burst user traffic.

Vendor Management System – OpenManufacturing (LIVE) *TypeScript, React.js, Strapi CMS, Supabase, PostgreSQL, GitLab CI/CD, Vercel*
Live: `https://vendor-mgmt-five.vercel.app/`

- Built a scalable enterprise SaaS portal orchestrating vendor lifecycles, automated multi-level approval queues, and procurement metrics.
- Constructed performant API integrations with **Supabase** and **Strapi CMS**, implementing relational schema rules and secure access controls.
- Configured production-grade **GitLab CI/CD automated pipelines**, cutting deployment cycle friction by **40%** and eliminating manual release regressions.
- Deployed zero-downtime architecture on **Vercel** with tuned asset caching and API response optimization, significantly lowering load latencies.

Gami5 Merchant Portal (LIVE) *TypeScript, React.js, Node.js REST APIs, Nx Monorepo, Material UI, Git*

- Built core modules for an enterprise merchant portal handling gamified marketing campaigns, digital reward distribution, and real-time rules engines.
- Designed and optimized asynchronous **Brand Kit Extraction** pipelines, enabling persistent non-blocking execution across frontend navigation.
- Integrated modular API contracts into an **Nx monorepo** architecture, optimizing data polling mechanisms and client-side memory efficiency.
- Spearheaded high-velocity feature shipping using structured Git workflows, pull-request validations, and comprehensive integration testing.

AREAS OF INTEREST

- 0→1 SaaS Product Architecture and Distributed Backend Engineering
- High-Throughput Asynchronous Workers, Event Pipelines, and API Design
- Cloud Infrastructure, Production Monitoring, Uptime, and Containerized Deployments
- CI/CD Pipeline Automation (GitLab), Developer Tooling, and System Scalability

PERSONAL SKILLS

- Extreme ownership, accountability, and 0→1 founder-first execution mindset
- High urgency in shipping resilient production systems and managing edge-case failures
- Clear technical communication, active collaboration in architectural reviews and stand-ups
- Rapid technical adaptability with high curiosity toward scalable infrastructure and distributed patterns

ACADEMIC DETAILS

PG-DAC (Post Graduate Diploma in Advanced Computing) *2025*
CDAC Bangalore

B.Tech in Computer Science and Engineering *2024*
Kolhapur Institute of Technology, Kolhapur

DECLARATION

I hereby declare that the above written particulars are true to the best of my knowledge and belief.

Place: Bangalore **Signature:** *Omparth Chougale*
